Data Wranging with MongoDB, Project:

OpenStreetMap Sample Project

Dataset Description

My primary area of study was Tarrant County, Texas. More specifically, I circumscribed a rectangle around the not quite square boundary of Tarrant County. The boundaries of my map area were latitudes [32.548 to 32.996] and longitudes [-97.5497 to -97.0319]. The closest link to the export area is http://www.openstreetmap.org/export#map=11/32.7723/-97.2911, but following the next paragraph is a screenshot of the exact boundary settings.

I chose this area because I am from Fort Worth and am familiar with our local place names and geographical conventions. Additionally, this county has close to two million people and hopefully enough OpenStreetMap activity to provide an interesting dataset.
